(蜱螨亚纲: 植绥螨科)

忻介六 梁来荣 柯励生 (复旦大学生物系)

我们从云南、贵州采得植绥螨属 (Phytoseius) 2 新种,描述如下。本文采用 Rowell et al. (1978) 毛序命名系统。模式标本存复旦大学生物系。

1.花溪植绥螨Phytoseius huaxiensis, 新种 (图 1~9)

鉴别特征 本种与Denmark (1966) 的 Taiyushani 群所属种类 相似,但其Z4毛光

(Department of Biology, Fudan University)

In this paper, two new species of the genus *Phytoseius* from Yunnan and Guizhou are reported. The systematic nomenclature is based on Rowell et al. (1978). The type specimens are deposited in the Department of Biology, Fudan University, Shanghai.

1. Phytoseius huaxiensis sp. nov. (Figs. 1-9)

This species readily differs from the known species of Taiyushani group (Denmark, 1966) by having Z4 setae smooth.

Holotype,  $\[ \]$ , Guiyang, 16— $\[ \]$  —1980, on Chrysanthemum indicum; Allotype,  $\[ \]$ , data the same as holotype. Paratypes,  $\[ \]$ , data the same as holotype;  $\[ \]$ ,  $\[ \]$ , Guiyang,  $\[ \]$ , Guiyang,

2. Phytoseius rubii sp. nov. (Figs. 10-16)

This species resembles *Phytoseius woodburyi* De Leon, 1965, but differs by having j3 approximately as long as distance between the bases of j3 and j5. This species is also similar to *Phytoseius fotheringhamiae* Denmark et Schicha, 1974, but it is distinguished from the latter by having J5 shorter and smooth, and by having the pair of pores previous to z5.

Holotype, ♀, Yunnan Cangshan, 1—WI—1980, on Rubus obcordatus. Paratypes, 2♀♀, data the same as holotype.
